Innovation

Examination no. 120435

Physical forms

Throughout the 20s years inventors tinkered with articulating-arm lamps. None of them really caught on until a UK-based freelance car designer and engineer invented the desk lamp we all know today. He realized he could add suspension mechanisms to lamps, tweaking the springs and pivoting arms to provide balance and obviating the need for counterweights.

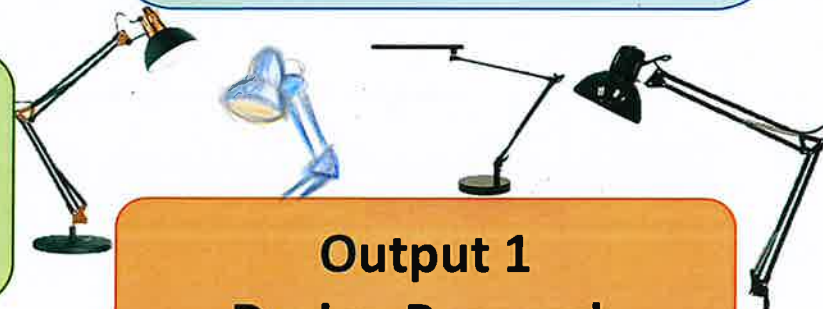

Swing Arm: the lamp with easily swing arm which can let you swing it in the right direction of light into the way you need. The swing arms usually has done from the metal (can be colour) and has a proportions 1:1 which allows to close it a line. To swinging it is a connector in the half of its length. This connector usually has made from the plastic. The "head" of the lamp can be different shapes. Mostly it is bulb shaped head. The basis is the circle to have a balance., This lamp can be so massive for small tables. For more balance this lamp can have a clip-on system.

Adjustable: it is a type of lamp in which has telescoping poles, So you can easily alter their height up or down. The main part of the lamp, the "neck", has made from the metal and the connector which allow us to move the lamp usually has made from the plastic. The metal "head" has made in a bulb shape. The basis of this lamp is a circle. It is handy for tables that have a place. If you have a small table than it is not your type of basis.

Gooseneck: the main idea of this lamp is flexible metal coil that connect the source to the base of the lamp. The neck of the lamp has made from the flexible metal and covered by the silicone or another flexible metal. This is so useable for small desc with small lightning there, it can be turned into side that you need. The head of it is cone, so the light is going in a cone shape to your table.

Construction

A table lamp usually consists of three main elements: a base, a tripod, and a shade or lampshade. The base serves to hold the lamp on the table, and the tripod raises the lamp above the table surface. A lampshade or shade serves to direct light in a certain direction.

Output 1 Design Research

A Base

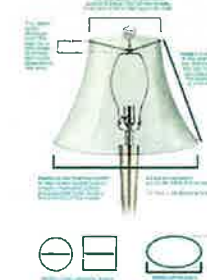

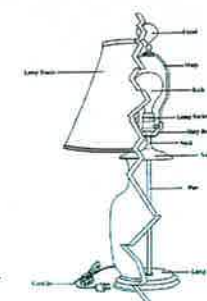

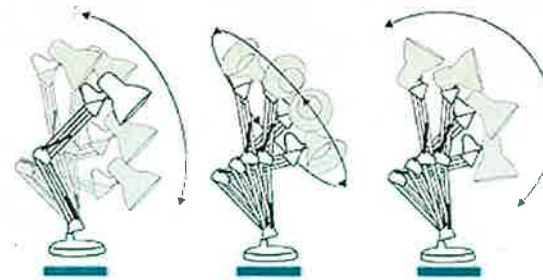

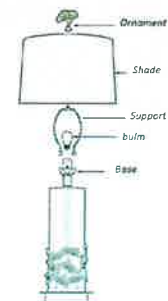

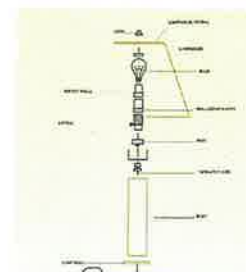

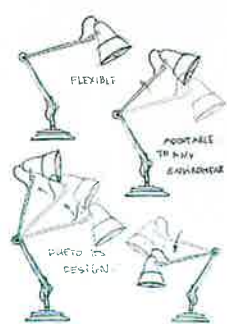

The base is one of the important things when you are ordering the lamp. Can be rounded one or on the table clip on system also it can be from different materials as wood, plastic, metal, etc. The base is not only for staying also in it is going some of the electric wires. Also it can have some of the accumulating systems like battery. The base can contain small elastic things because of which your lamp will stay more stable.

A Tripod

A tripod also called a "neck". It is really like a neck for the lamp, because it brings light in the way you need: in the side, on the top or the bottom. So the main function of the tripod is to hold and drag the "head" for different manipulations. A tripod can be different shapes and structures. One of them can be gooseneck structure from the flexible material. One of them can be non-flexible (e.g. adjustable) or half-flexible (swing arm lamps). In flexible and non-flexible lamps the electric wires are going inside the materials, so they covered by the material of the tripod. In the half-flexible tripods the wires are going outside and going near the main parts and then going through the joint on the half of it.

A Shade or Lampshade

A shade of the lamp also named as a "head" and it has a main functions of the lightning. The shade can be done from the different materials as any tissues, metal, plastic etc. The type of the lightning will depends from the type of lamp "head". If it has done from the tissue it will be diffuse light, so it is not usable for studying or working. If the main material of the lamp is strong (e.g. plastic, aluminium or any other metals) this lamps will give straight light. Inside the "head" are electric wires which are going to the lamp which is the main part of the lampshade and the whole lamp. The lamp inside the "head" can be different (e.g. LED lamp, bulb lamp) if it is a bulb lamp it will be with the aluminium (usually) part in which will stay a bulb.

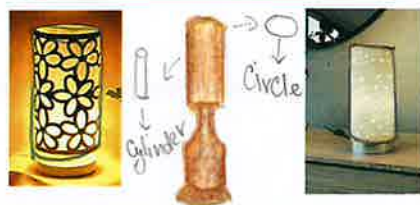

Shapes

Examination no. 120435

Modern lamps for use on tabletop models come in a wide variety: model sizes by function, mounting methods and other indicators.

Cylinder. An elongated cylindrical lampshade produces a directional luminous flux. Lamps with this detail are suitable for reading or work that requires local "backlighting".

Circle or Hemisphere. One of the most common forms. Models with a round shade perfectly diffuse light. This property makes such specimens the best table lamps for a desk.

Cone. Like the round one, the cone-shaped lamp diffuses light well. For this reason, it is also suitable for the desktop.

Colour

Lamp: The whole lamp can be different colours you want. Depending on your material your lamp will be different colour tone. Colours also caused your aesthetic and style in which is your room. Now it is possible to do any colours and/or ornaments you want.

Bulb: the bulbs in the lamp now can be very different colour with which the light will be different as well. Also different bulbs have their voltage and related to that it will be the various gradation of the light and different type of a light (moon light or a sun light).

Aesthetic

Definitely table lamps add their aesthetics to a place. This aesthetic can be either work, play, school, or some old establishment, bar. Lamps can transmit different light, as already mentioned, therefore this affects the aesthetics itself. shape, appearance, color, style also influence. Thanks to all this, you can adjust the aesthetics to what you need.

Materials

Ceramic Table Lamps: the main body of the lamp has done from the ceramic which is not so hard and can be broken if I will fall. Ceramic is very light material. The colour of it can be whatever you want. The lampshade can not be made from the ceramic because it is not a material which will let light go through it. So if the lampshade has done from that it can be mostly for decoration, but not for the work.

Plastic Table Lamps: every type of the lamp can be made from the plastic. this material is so usable because you can get your lamp in any shape, colour, type.

The plastic also the most popular material because it is not very hard and not very soft material. Also if the plastic is very thin it can allow your light to go out. It can be a lamp which is doing a different shapes on a wall e.g. stars, it can be a lamp which gives a light very sprightly to your work or it can be a night lamp with very muffled light.

Metal Table Lamps: popular type of lamp, because of this handy material which can be covered by silicone. Also this material is hard to break, so it can be used for child room. This type of material does not shine through, so it can be used for a lamp with a bulb inside to send your light sprightly on your work. Also it is a good material for the base of lamp. It is slayable because of its weight.

Wood Table Lamp: this lamp is mostly using for the interior like loft. The main body is wooden and the "head" can be from any material (e.g. plastic, metal). Also it is not so usable for everyday using, because it can be so massive. Also it can take any shapes and colours. In the lamp usually LED-lamps.

Output 1 Design Research

Target market

The target market for table lamps is most likely students and their parents, because they most often need this kind of thing due to the constant need for study, classes or lessons in the evening. Also, the target market is offices and office workers, they always need this kind of product because they spend most of their time at the office desk and they always need light, especially in the evening. Design ideas are also part of the target market, this is a small part of it, because some ideas can be very non-standard and not ordinary.

Aesthetic

The aesthetic of this lamps is similar, because both of them has the same way of use: to be a desk lamps.

On the first lamp has an aesthetic of a classic style and will be good for a working place of student.

Materials & Colour

Both lamps are made of different materials, but their switches and plugs are made of the same material: plastic. Also, the wires are made of one material: silicone

this lamp is made of plastic and is completely black.

its light consists mainly of warm and bright light

Physical Form & Shape

The shape and type of lamps are completely different. All they have in common is this name “table lamp”.

This is a swing-arm lamp with a base of a circle. The switcher is ordinary and plug is UK type.

The lamp has a cone type “head” with an ordinary warm color bulb in it.

Features

The very main function and feature of this lamp is its movable neck, which allows you to rotate it anywhere. This adds uniqueness and convenience to it, increasing its popularity among the target market.

due to its stable leg, the lamp is suitable for children, because the risk of it falling is reduced

Ergonomics

If you look at it from the ergonomic point of view, it is not suitable for everyone. For example, on a small table its massive base may not fit and may get in the way.

on the other hand, her leg is movable and this helps in work or study
also, its lamp color will not stand out much from ordinary light, but will still illuminate the area.

Examination no. 120435

Output 2

Compare and Contrast

Aesthetic

The aesthetic of these lamps is similar, because both of them have the same way of use: to be a desk lamp.

The second lamp is an aesthetic of a loft style cause of combinations of this colour, style and use of its materials.

Materials & Colour

The first lamp is made of metal and made in silver color. Its wire itself is made of transparent materials, as is the switch with a plug.

also its light is in the middle between cold and warm.

Physical Form & Shape

The shape and type of lamps are completely different. All they have in common is this name "table lamp"

The type of this lamp is a gooseneck lamp, So it has a swingable neck. Also it has a clip-on system in the base.

In a main form its head is a circle in which is a LED-bulbs.

Features

The most important functionality of this lamp is its movable neck, that is, you can turn it in any direction. Such are its LED lamps, which diffuse the light from the lamp well and do not use as much electricity as conventional light bulbs.

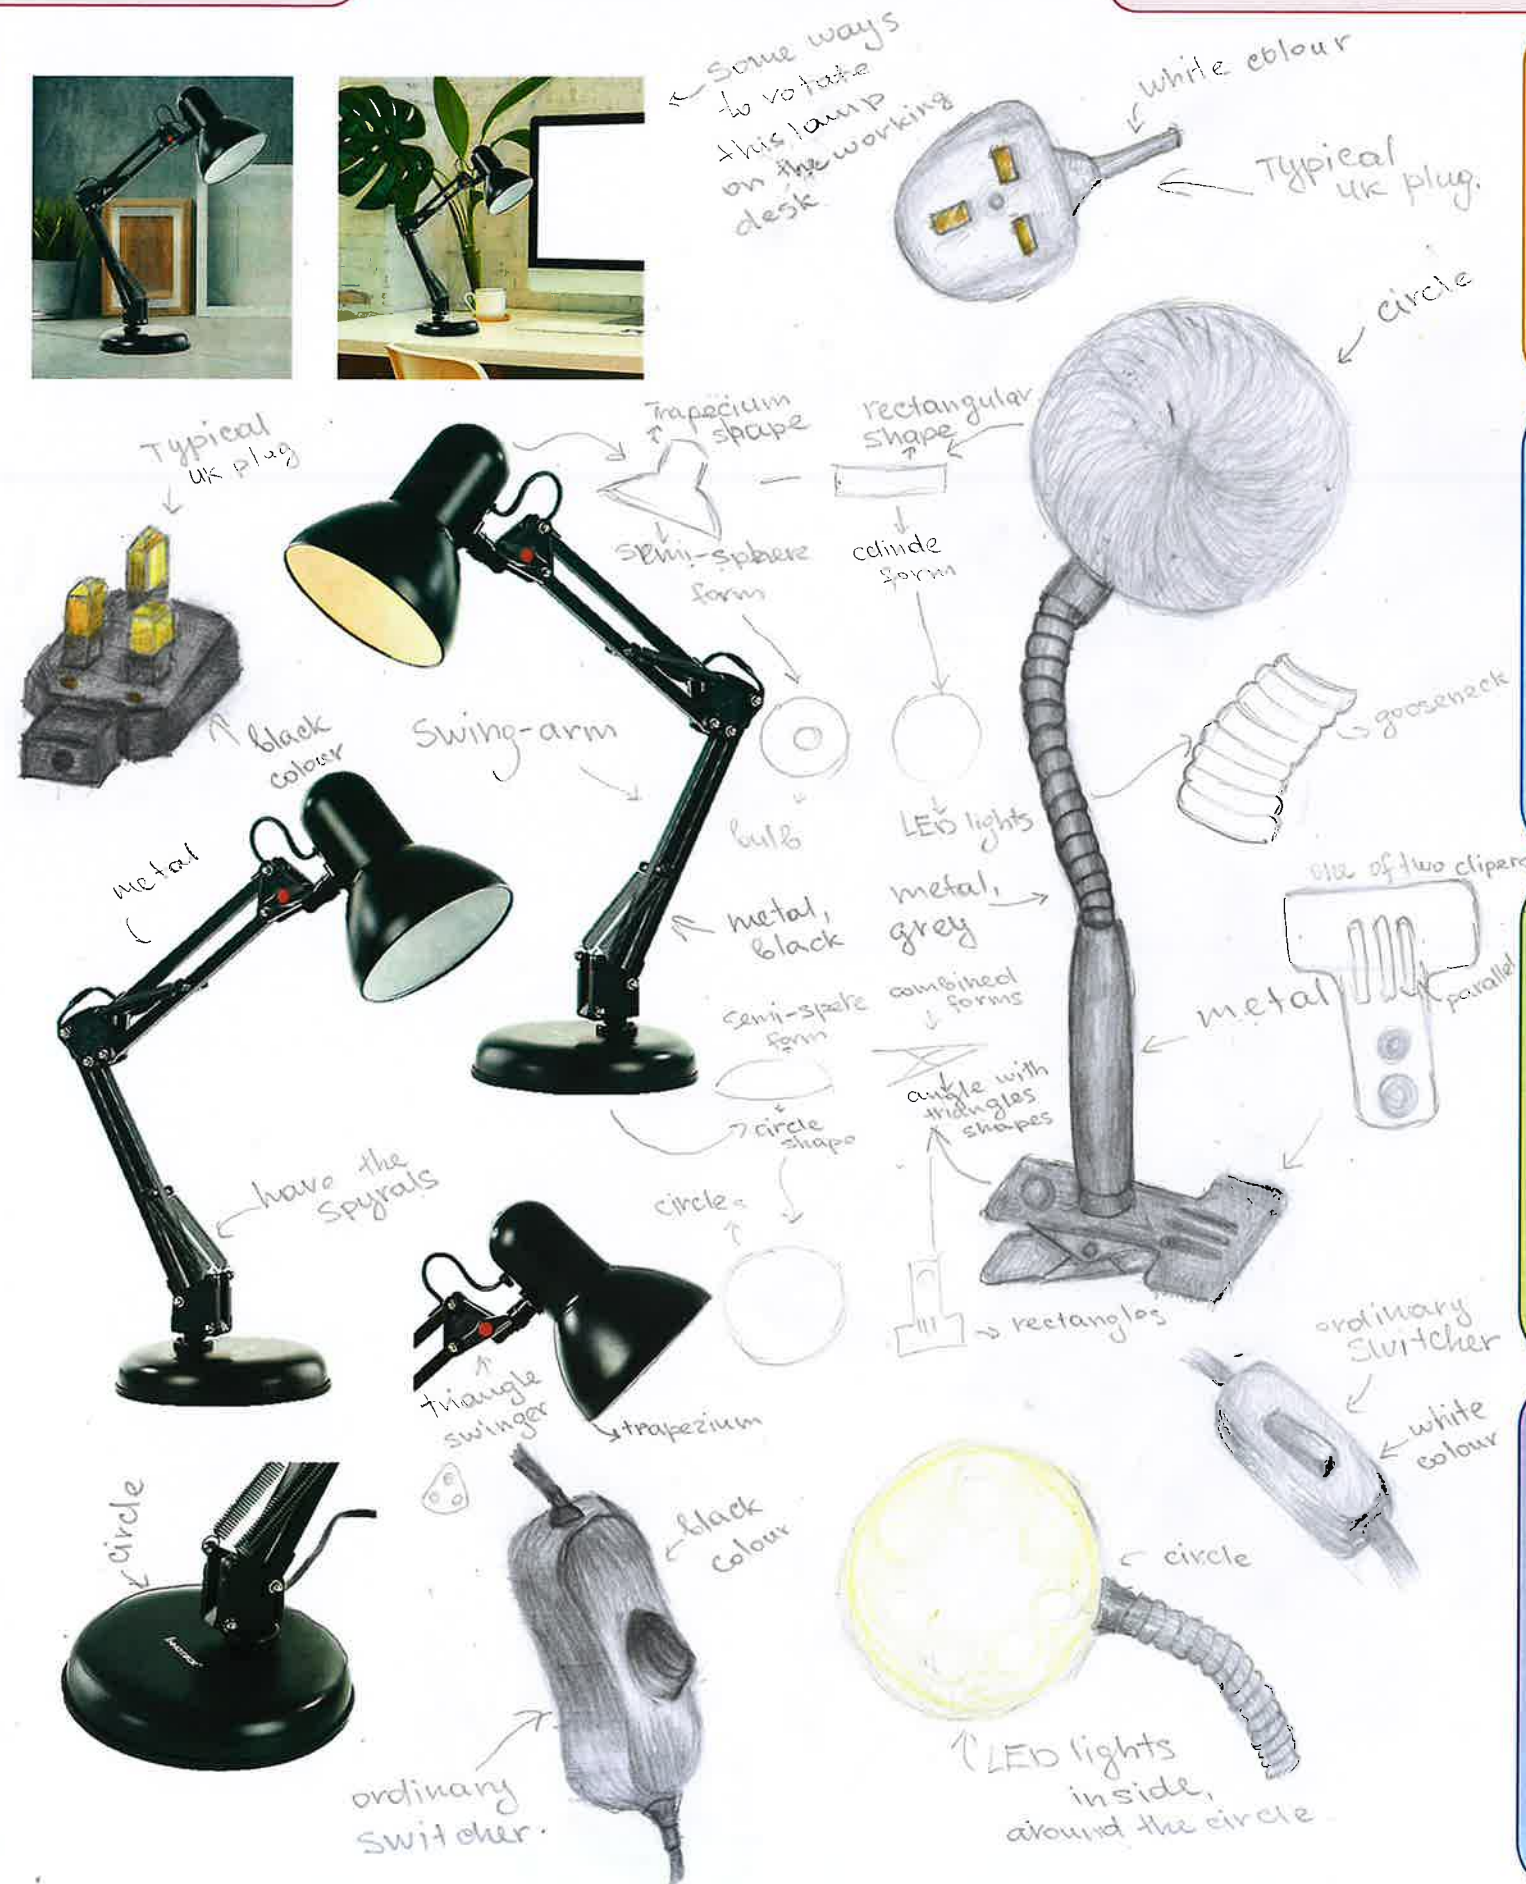

also one of its main features is its fastening system, which is very convenient in our time

Ergonomics

as mentioned earlier, this lamp saves your electricity due to the LED system inside the lamp.

This lamp is also convenient for tables with a small working part, because it does not stand on the table, but is attached to it from the side.

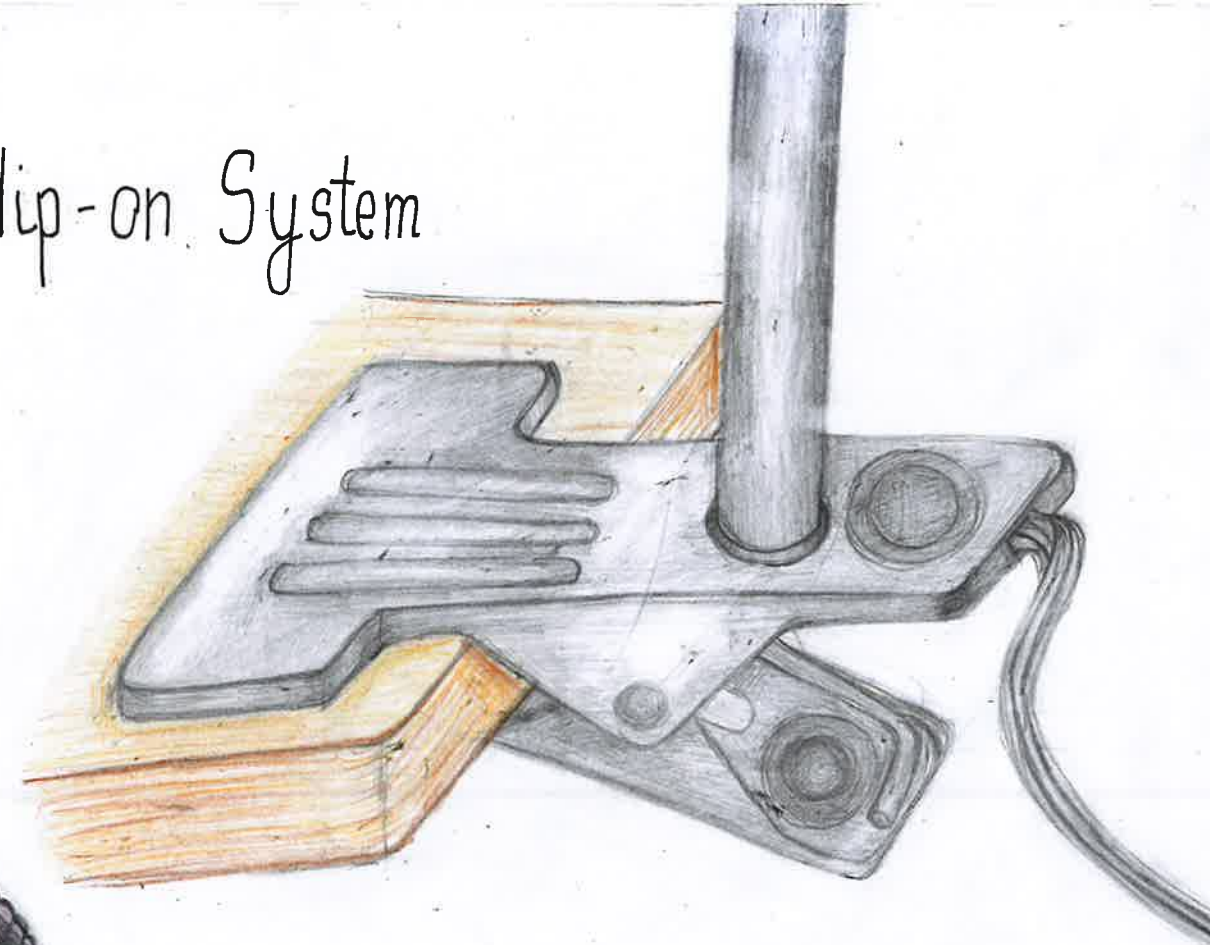

its only disadvantage is that if the table does not have sides, then you will not be able to attach it to the table.

Examination no. 120435

The ancient Egyptians are very famous for their original way of writings with all of that Symbols, which could mean something as animal or a whole word. With their symbols I can: 1. Do the decorations; 2.

Their way of painting can be used for the decor or as a base.

More symbols for rounded shapes

The pyramids can be a good base of the lamp or its main part.

The columns can be used as the "neck" or to hold something in the lamp. Also a good decoration.

The statue is not very useful, but can give an inspiration for my theme or to be the decoration

This building can be also a lamp base or give a holding to it as it is separated parts.

Inspiration Ideas

Examination no. 120435

The actual lamp from one of the symbols, e.g. Hawk

This necklace can be used for desk base or as the main part of it.

Ring can be the decoration on the bulb-lamp or on the base of the lamp.

The bracelet is also a good way to do the base for the lamp, due to its form and well-detailing. Can be also as a tripod.

This necklace can be used as a shade for the tripod, but also for the night light as its main shape

Pharaoh's head can be the decoration on every part of the lamp.

There is a head of one of the Maya, so it can be as the decoration to improve the theme.

This bracelet was interesting for me because of its creatures, so I can use them as a decor for everything.

These little creatures are also useful as a decor, but also can be a lighting section of the night light.

The roof of the Maya Ruins is quite complicated, so it can be used for its symbols or its incredible form for every part of the lamp

This medallion can be used for its ornaments. can be used on base, tripod or the shade

Ancient Rome's were also a good writers and got a great idea, for that time, to keep all of their symbols on the stones, also it can be used for decorations.

Lira is interesting and can be the main part of the lamp without any decors or developments. Also can be a tripod with bulb-lamp inside.

Ancient Rome's clothes were made up from the different and bright colours, which were in the unexpected combinations, as gold + red. I can take that combinations of colours for my final idea.

The Greek Statues can be a good holders for the lamp and can be used instead of the columns of the lamp. Also, as the main part of the lamp.

Greek ruins can be used for the inspire of the form for main parts or can be taken for its combination of the colours.

Greek's symbols are also very complicated, they look like the English letters somewhere and I can take them for the logo

This symbols are not the letters, but also can be used for the logo or as the ornament on every part of the lamp.

The ancient instrument is the way of inspiration for me due to its vibe of that time.

This gold Snake-ring can be used to develop the "neck" of my lamp as the circles around it.

Acorns and Spikes around the gold crown or the necklace can be as a decor or as the separated parts for the lamp.

The earrings are good represent of what can be the lamp tripod and which shape it can take if it is hanged.

Necklaces, as I said, can be for base or in this variant it can be for the decors every part of the lamp.

The big gold disk and the crown also are incredible ideas for the actual lamp or its base, since it gives us a feeling of an ancient

Gold bracelet and earrings are also one of the ideas for the main part or the base developments. The bracelet also can be taken for the bulb-lamp decor.

Their clothes are also inspire to do the shade for the tripod for itself. The statue can be the actual lamp for main part or to be a column.

1. Acorn Style

I don't think that it will be usefull for the table due to its head

LED lights in plastic

metal form

metal base

I don't think that this lamp will be very popular on the market due to its unusual form

bulb lamp

plastic base

plastic acorns around

2. Snake Style

I don't feel, that this lamp is what I am looking for

bulb lamp

metal snake

rounded snake

LED lamp snake in plastic

rounded base

I don't think that this lamp is what I want to see at the end

LED lamp in plastic

stand on one of its plastic head

3. Pyramyd Style

I don't think that this lamp is usefull for the desk lamp

bulb lamp on the top

plastic main part

pull inside

view from the side

small bulbs on the stairs

plastic main part

plastic collons

View from the top

bulb lamp inside

This lamp will not have a high rates on target market, because of its unusual form.

Posible Solutions

Examination No. 120435

I don't feel that this idea is what I am looking for

plastic base, which is pull inside for the lamp in it

View from the top

4. "Bust of Artemist" Style

This idea can be something close to what I want

LED lamps

view from the top

view from the side

bulb lamp

metal tripod

gooseneck leg in metal

Also LED lamps inside the main part

have a spaces between the rounds to let the light go

This lamp will be hard to use as a desk lamp, so it is not what I want and need.

5. The Hawk Style

This idea is not looking like I want to get at the finish

bulb lamp as its head

plastic main part

plastic stand

This idea is very crazy for the target market

bulb lamp

plastic main part

metal stand

This lamp is not very useful to be a desk lamp

LED lamp in all of its body

made in plastic

rounded base

6. The Lira Style

This idea is very close to what I want

tripod with 2 liras

bulb lamp

rounded metal base

gooseneck leg

This idea will be start for my final.

bulb lamp

2 lira shaped legs for the main part.

Lira Shape

This shape will be not very useful for the desk, due to its two-liras form, which will give not to much light, so it is not what I need. Made in

plastic for stayable.

This part will give enough light through its liras, but it will be not very stayable and useful for the small tables, due to it takes

to much place to stay, made in metal.

This shape will be good for lighting, but it still be not so stayable, so it needs a base under it, I will pick this lira and order a material for it later.

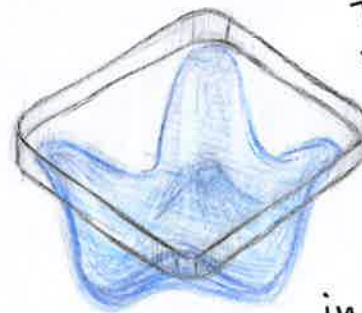

Base under the Lira

The rounded base will be good for the lira, because it is stayable and accurate, but not so interesting in the design, can be made in plastic.

This base contains big rings around it still be useful, but it is also not fitting in for the lira, can be made in plastic.

This base in a "table" shape with waves under it, it is usable for its stayability and design, so it will be well-favoured in my design and it

will fitting in on every table. Can be made in transparent plastic.

Modified Design Examination No. 120435

Decorations on the base

Ordinary wood decor as on the another antient liras. Some ornaments, as brunches, flowers, leaves and another symbols. I think that it will be ordinary and boring for the whole idea.

Some decorations as a piece of tissue from the antient clothes, but it still be not look like I needed and I wanted, made in plastic.

Decoration, as a wave in the plastic to complete sea theme from the base.

"Shell" shape will be good to complete this theme and to decorate a blue-sea coloured base. It can be made in a shine plastic.

Lamp and Lira Decorations

The bulb-lamp will be suitable for lamps with the tripool, but my lamp has not get it, so this idea for lamp will be bad for the desk.

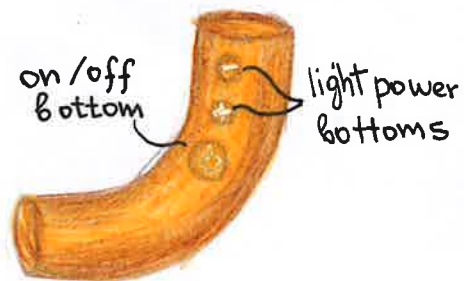

Bulb-lamp in the rounded shape with some symbols around it, so it will give a light only through the symbols and it will be more like a night light, but not a desk lamp.

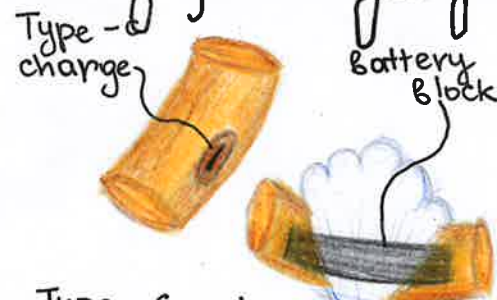

This bulb-lamp is in the glass-ball around it. Glass-ball contains the spirals around it and also gives a beautiful lights on the walls and around itself.

Bottoms and the way of Charging

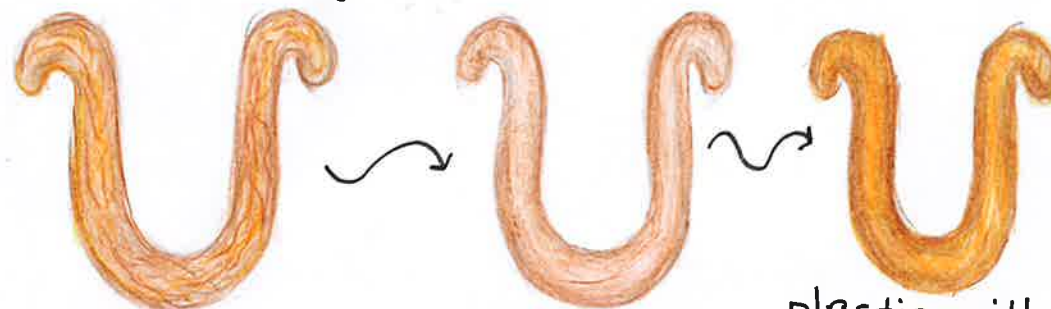

on/off bottom light power bottoms

Type - c charge will be the easiest way of charging its battery block at the back of the lamp.

Colour of the Lira

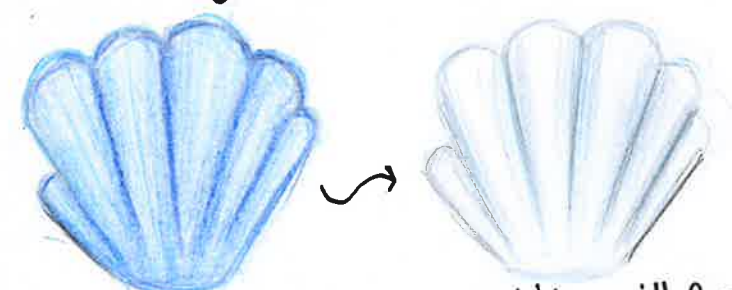

Wood lira will be not so good look like.

plastic lira will be not so stayable

plastic with the metal covering to look like the real

Colour of the Shell

Blue colored shell will be in one color with the base, so it is not suitable.

white will be hear the original colour of shell, so it will be good for the theme.

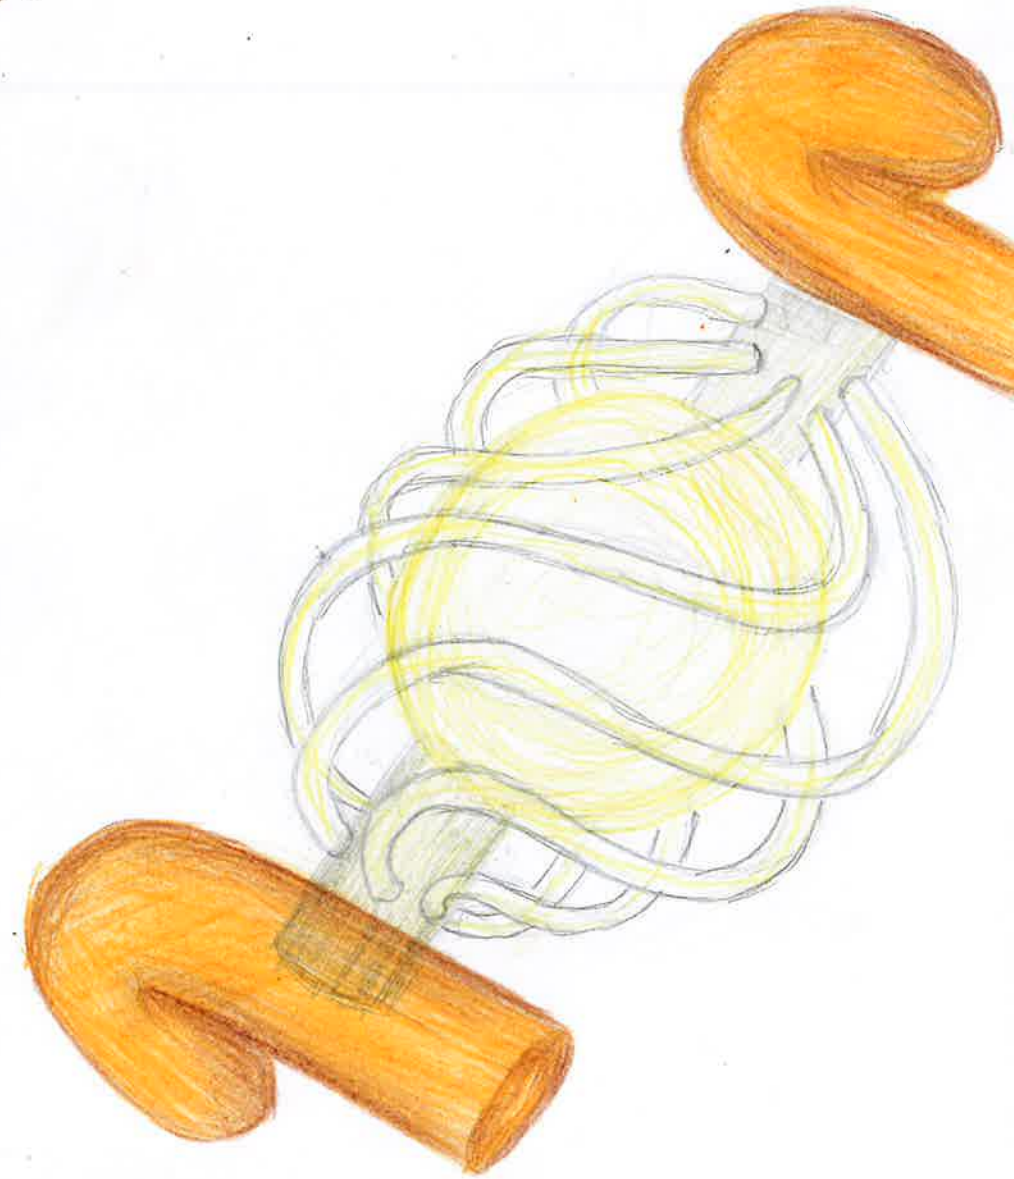

Concept Design

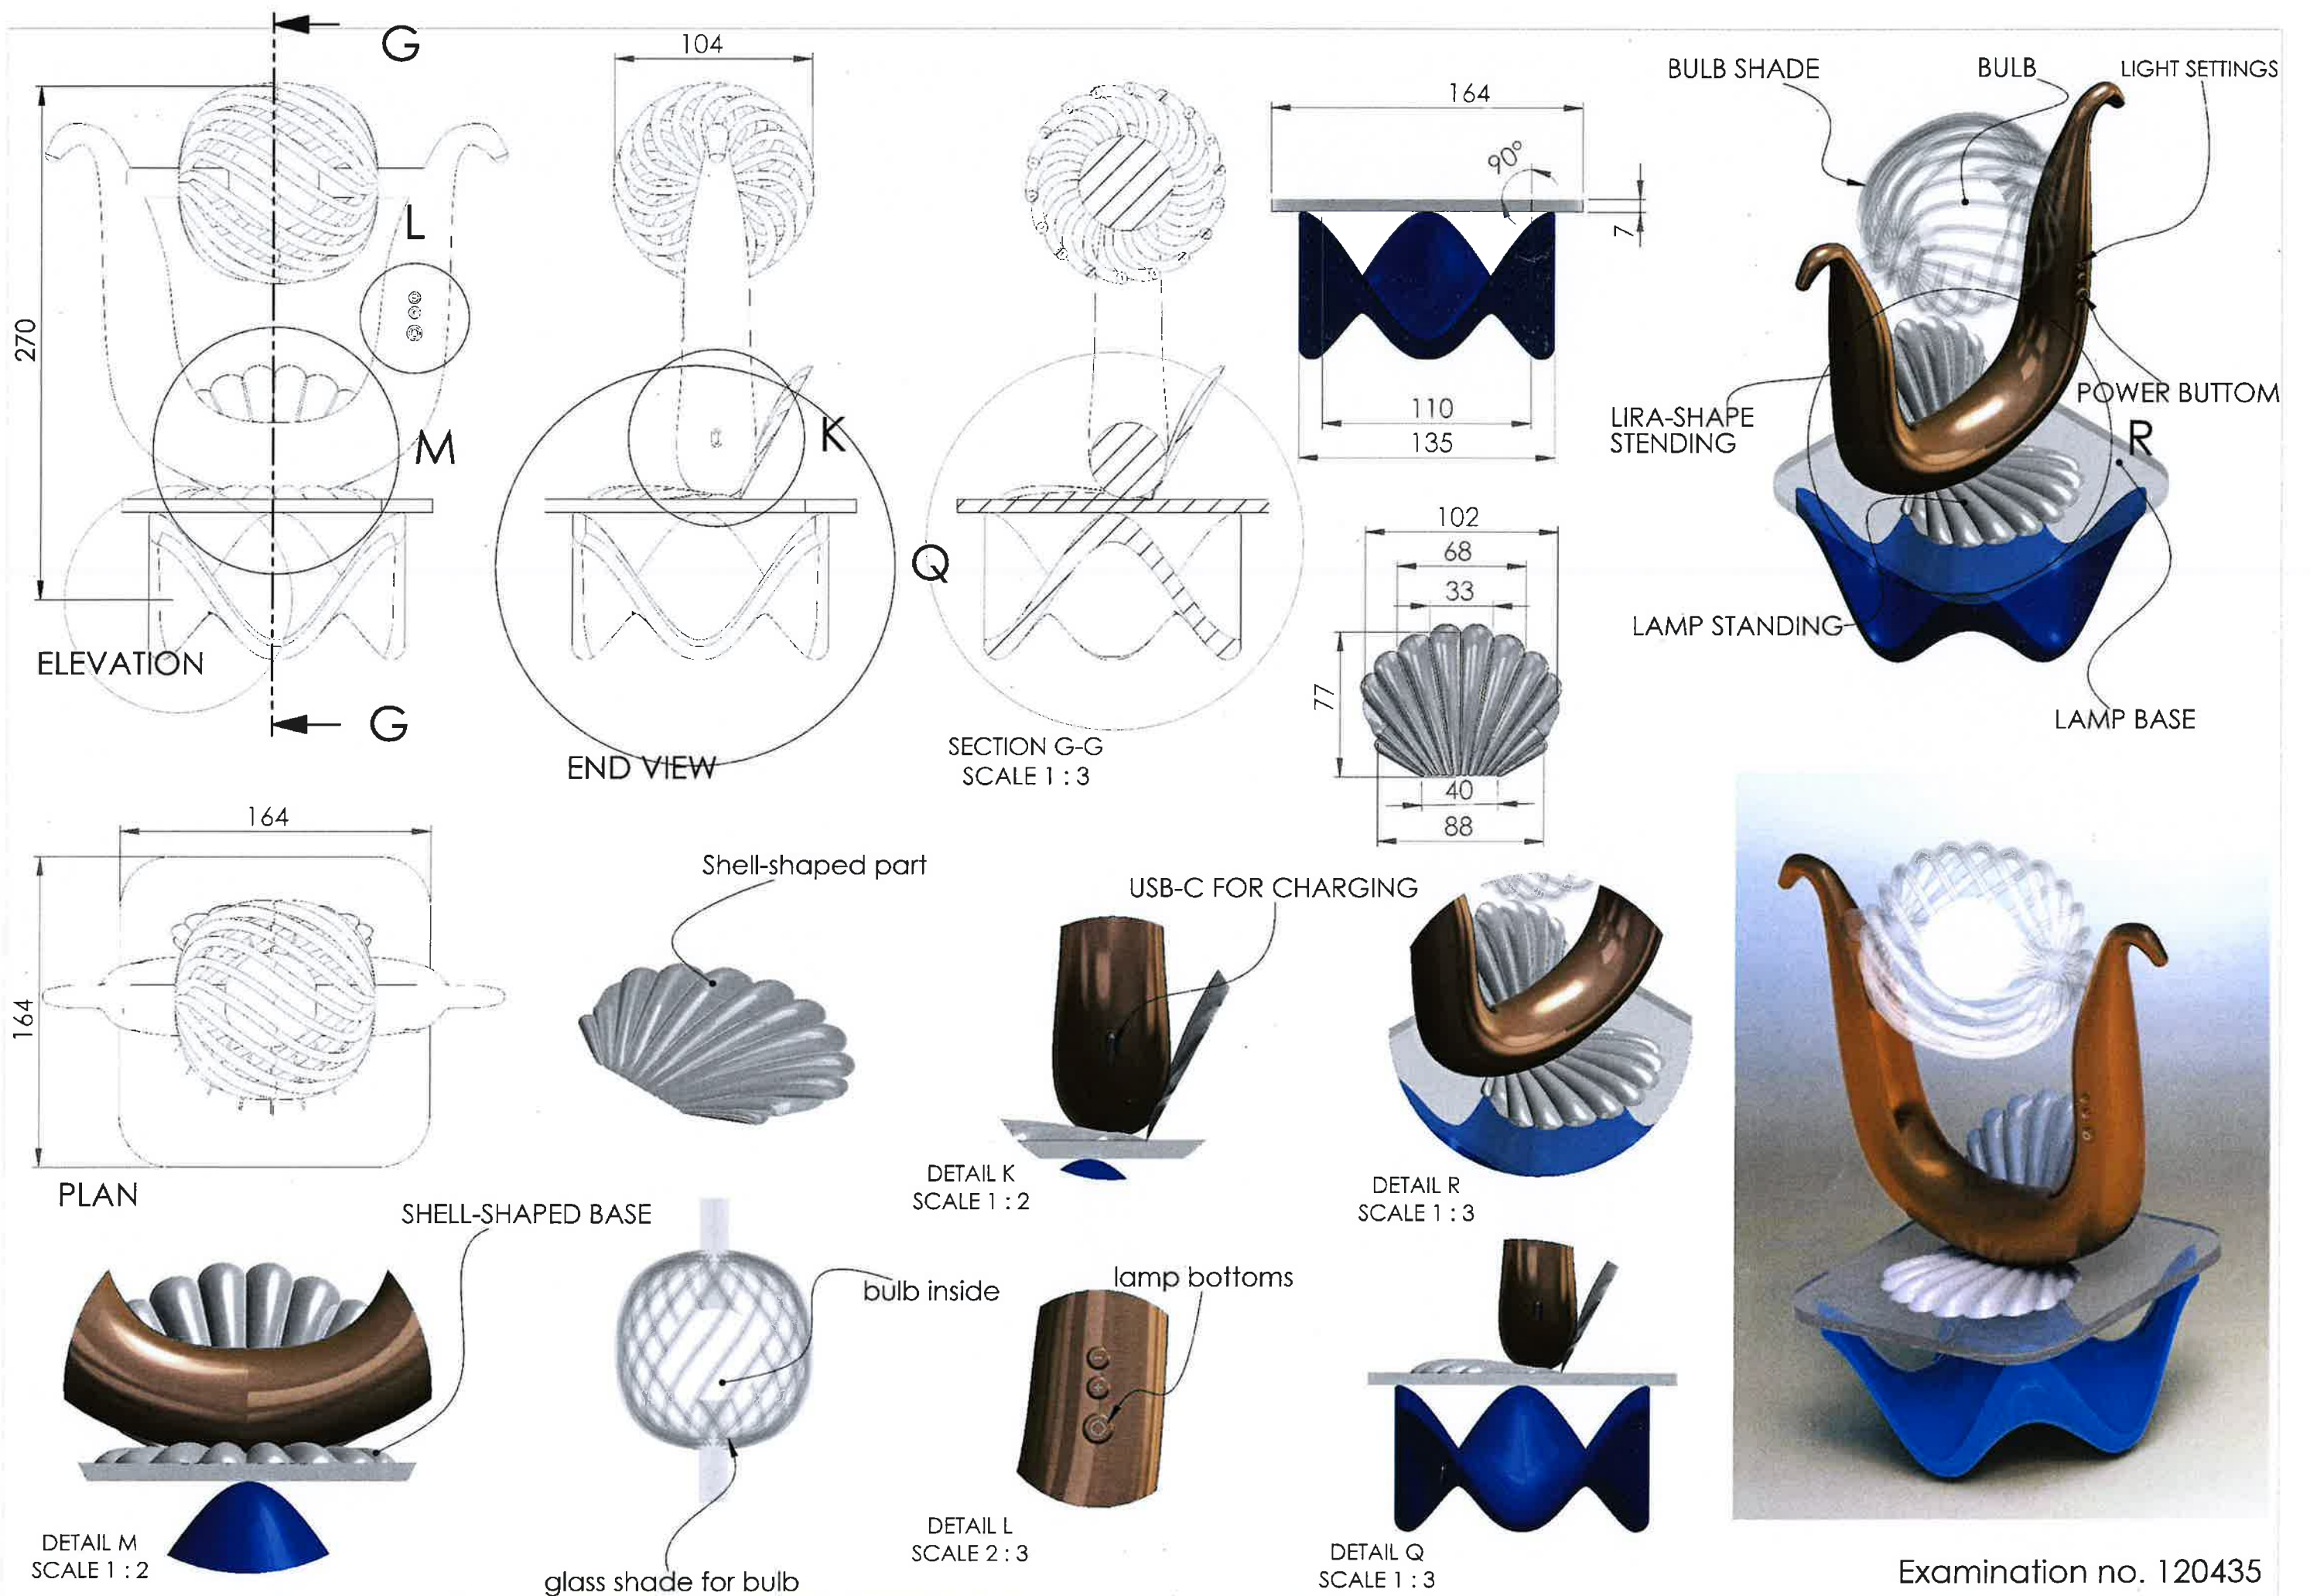

Examination no. 120345

The Shell-Shape Decor

The Bulb Part
