Experience

Ericsson

Summer Intern

Ericsson Campus, Athlone, co. Westmeath

June 2026 – September 2026

- Validated the RH OCP CaaS Platform for Cloud RAN and 5G Infrastructure across containerized microservice deployments (Java, C++)
- Investigated a systemd/kubelet-crio service recovery issue related to BindsTo= propagation semantics, debugging across the OpenShift/Kubernetes stack.
- Built and maintained CI/CD pipelines in Jenkins, including Groovy boolean parameter handling for automated validation and deployment.
- Automated healthcheck and validation tasks using Python and Shell scripting, covering BIOS/iDRAC version alignment, PTP thresholds, and performance profiles.
- Applied 5G/O-RAN concepts including PTP, IEEE 1588 timing, and gNB architecture in test reporting and evaluation.
- Explored C#/.NET fundamentals alongside Spring Boot as part of internship ramp-up and cross-stack familiarisation.
- Participated in Scrum ceremonies and contributed structured feedback during a competence-uplift initiative on technical course content.

CoderDojo Summer Camp

General Demo with leading Sessions

Maynooth University, Maynooth

June 2025 – July 2025

- Demonstrator on 2 sessions for Photo Editing and Turtle Stitch.
- Teaching how to program in Python by explaining step-by-step code.
- Tutoring two of the outdoor sessions (Video Making and Cryptography Treasure Hunt).
- Ensured Safe, Calm and Friendly Environment for Studying.

CSC Tutoring

General Tutor

Maynooth University, Maynooth

September 2025 – Present

- Helping 1st years with their labs and assignments for CS modules.
- Heading the sessions for Java modules (array, loops, recursion) for second semester.
- Helping some 2nd years with their assignments and labs for CS and Math.

Skills

Programming Languages: Java, Python, HTML, CSS, JavaScript(Wireframes: Node.js, React, Next.js), C#, MATLAB, R, Processing 3.4, Prolog, SQL(PostgreSQL, SQLite3), noSQL(mongoDB), C, C++, Shell Script, Groovy.

Technical Skills: All MS Office Programs, Canva, SolidWorks, Adobe Photoshop, Eclipse IDE, Visual Studio Code, GitHub, GitLab, Gerrit, Jira, eTeam Space, Jenkins(Job and Pipelines), Docker, Kubernetes, Azure (Functions, SQL, Blob Storage)

Operating System knowledge Windows, Linux(Ubuntu, Red Hat), macOS

Languages: Russian (C2 – first language), Ukrainian (C2), English (C1), German (A2–B1).

PRO (Public Relations Officer) in Computer Science Society, Maynooth University

Other Skills: Team Leadership (PRO, Maynooth CS Society), Strong Work Ethic and Organizational Skills, Fast Learner, Adaptable in Cross-Functional Teams, Strong Analytical and Problem-Solving Skills.

Projects

F1 Pit Strategy Monte Carlo Simulator	Independent Project
• Fits a fuel-corrected tyre degradation model from real historical race data (FastF1 API) and runs a Monte Carlo simulation comparing pit-stop strategies; FastAPI backend, Next.js/TypeScript dashboard, and an ASP.NET Core microservice for strategy validation. • Dockerized with Kubernetes manifests and a GitHub Actions CI/CD pipeline. Live at f1-strategy-simulator-three.vercel.app – additional strategies in active development.	
ChillBill – AI-Powered Expense Sharing App	Maynooth University Microsoft Group Project
• Full-stack web app for splitting bills and tracking personal spending via AI-powered receipt OCR (Azure Document Intelligence). • Designed a 7-entity relational schema and implemented a debt-reduction algorithm to minimize the number of repayment transactions in group settlements. • Frontend built with React; serverless backend built with Python (Azure Functions), with data in Azure SQL and receipt images in Blob Storage. • Built a self-hosted deployment option (Docker Compose) running frontend, backend, database, and local AI inference entirely on user-owned infrastructure. • Validated with 12 end-to-end system tests covering authentication, all three split modes, debt optimization, and session persistence — full pass.	
Smart CV Reviewer	Independent Project
• AI-powered web app that compares a CV against a target job role, highlighting gaps and providing a standalone score out of 100 with improvement suggestions. • Built with Next.js and CSS Modules; integrates the Mistral AI API for CV analysis and unpdf for parsing uploaded PDF documents. • Designed the review logic to return structured, actionable feedback rather than a generic score, prioritizing practical usefulness over surface-level matching.	
Engineering Project – Mass-Spring-Damper Control System	Maynooth University, Maynooth
• Modeled and controlled a mass-spring-damper system in MATLAB, applying control theory (e.g. PID tuning) to achieve target settling time and minimize overshoot. • Combined analytical system modeling with simulation to validate controller performance against design requirements.	

Achievements

Ardscoil Phadraig DCG Project of the Year (2024) and Principal's Award (2023); IMTA Math Competition, 3rd place (2023).
Academic Olympiads: multiple city-level placings in Math, English, and Computer Science (2018–2022).
Solo Singing: 1st place county (2021), 1st place city (2020), plus area placings (2018–2019).

Education

Maynooth University <i>BSc Computer Science and Software Engineering</i>	Maynooth, co. Kildare <i>September 2024 – Present</i>
• First Year (Annual Mark: 81.7): Computer Science (86.3), Engineering Science (68.0), Mathematics (86.3). Highest modules: Intro to CS II (97), Intro to CS I (91). • Second Year (Annual Mark: 78.2): Computer Science & Software Engineering (78.2). Highest modules: Web Information Processing (94), Calculus 3 (93), Intro to Statistics (90).	
Ardscoil Phadraig <i>Secondary School</i>	Granard, co. Longford <i>2022 – 2024</i>
Lyceum №148 “The Planet of Happiness” <i>Primary and Secondary School</i>	Dnipro, Ukraine <i>2013 – 2022</i>
